EXPERIENCE

LinkedIn

Senior Software Engineer 04/2026 – Present
- Created a Managed Event Enrichment Platform to enhance the modification of Kafka events through configuration-driven processes using Flink, reducing user adoption time from ~2 days to ~1 hour.
- Developed Cost-to-Track, enabling users to monitor infrastructure costs of instrumentation at multiple levels.

Software Engineer 05/2024 – 03/2026
- Developed and maintained instrumentation platform supporting over 1 trillion daily events, ensuring reliable data pipeline operations at LinkedIn.
- Led the migration of stream processing system from Apache Samza to Flink, achieving 97% performance parity by developing 12 parity jobs.
- Collaborated with HDFS, Kafka, and Schema Registry teams to deliver multiple critical infrastructure solutions, improving system robustness.

Grab

Senior Software Engineer 03/2023 – 05/2024
- Increased repayment rate by 1.2 percentage points by developing a Kafka-based notification system and collaborating with product managers to identify user pain points for lending products.
- Loan refinancing: Introduced a new method availing line of credit for DAX partners by restructuring existing loans, raising disbursal rate by ~S$2M

Software Engineer 08/2021 – 03/2023
- Re-architected auto-deduction flow, reducing cron job time from 1.5 hours to 20 minutes
- Set up CI/CD pipelines for all post borrowing microservices, cutting QA regression cycle from 3 days to 1.5 days

Software Engineer Intern 05/2021 – 08/2021
- Helped increase test coverage for multiple microservices to ~95%.
- Collaborated with Julo Team Indonesia to launch and monitor 2 DAX Cash Loan products, ensuring stable rollout and user adoption.

HighRadius 07/2020 – 04/2021
Software Engineer Intern
- Developed encryption for user Pll data, reducing cloning time from 2 hours to 5 minutes

PROJECTS

Dumb TF
https://github.com/Sidray-Infinity/DumbTF
- Developed a deep learning library from scratch using only NumPy
- Benchmarked on MNIST, Boston Housing, and other datasets

Chess Engine
https://github.com/Sidray-Infinity/ChessEngine
- Developed a chess engine using convolutional neural networks for optimal move predictions
- Deployed the engine on a web server with a user interface for interaction

EDUCATION

Bachelor of Technology 08/2017 – 05/2021 | Bhubaneshwar, India
Kalinga Institute of Industrial Technology
GPA 9.17 / 10

SKILLS

Golang, Java, Python, C++, Scala, Rust, Bash Scripting, Kafka, Spark, Flink, Airflow, Samza, Kubernetes, Docker, CI/CD, MySQL, ElasticSearch, GitHub Copilot, Cursor IDE, Al-assisted Code Generation, Agile, Event-Driven Architecture, Distributed Systems
